

Activity 2: SIPOC and Value-stream Decision Map

Level: Foundation Duration: 60 minutes Mapping: K4 A1 Tools: SIPOC tool; system-loop tool; worksheet

Goal

Define process scope with SIPOC, classify value-added and non-value-added work, and produce a current-state decision map.

Learner output

SIPOC, current-state value-stream worksheet, flow/pull improvement hypothesis and evidence plan.

Files in this folder

- README.md / README.pdf - activity guide and detailed procedure
- scenario.md / scenario.pdf - case facts and questions
- worksheet.md / worksheet.pdf - structured response template
- evidence-checklist.md / evidence-checklist.pdf - acceptance record
- data.csv - mock dataset when analysis is required

Detailed procedure

1. Read the scenario and select one start and one end boundary.
2. Complete Supplier, Input, Process, Output and Customer fields in the SIPOC tool.
3. Define two measurable customer requirements for the output.
4. List the current material and information steps in sequence.
5. Record process time, wait time, WIP and first-pass yield for each step from process-data.csv.
6. Classify each step as value-adding, necessary non-value-adding or pure waste.
7. Map one reinforcing or balancing feedback loop using the system-loop tool.
8. Draft a future-state hypothesis that improves flow or pull without weakening safety or compliance.
9. Specify the evidence that would confirm the hypothesis.

Verification

Complete every acceptance item in evidence-checklist.md. Submit the worksheet plus calculations, exported tool output or screenshots named in the worksheet.

Safety, privacy and responsible AI

Use only the supplied scenario data unless your organisation has authorised another dataset. Remove personal, confidential and export-controlled information. AI outputs are suggestions until verified by the named human decision owner.
