

Scenario - Activity 2: SIPOC and Value-stream Decision Map

A medical-device subassembly moves through order entry, kitting, assembly, inspection and release. Handoffs and information delays are not visible in the current flowchart.

Questions

1. What is the customer-defined output?
2. Which steps transform the product correctly the first time?
3. Where does information wait?
4. What feedback loop sustains the queue?

Known facts versus assumptions

Statement	Fact / calculation / report / assumption	Evidence source	Confidence
