

Scenario - Activity 10: Lean-AI Pilot Charter and Control Plan

Orion must choose one improvement: reduce inspection queue, improve CNC uptime or stabilise material replenishment. Each option has different value, data readiness and risk.

Questions

1. Which use case addresses the system constraint?
2. What is the simplest informative experiment?
3. What are the stop conditions?
4. What evidence supports scale, redesign or termination?

Known facts versus assumptions

Statement	Fact / calculation / report / assumption	Evidence source	Confidence
